

WHAT IS CLAIMED IS:

1. A rotating display holder with space allotted for video cassette recorder (VCR) tapes, digital video disks (DVD's), and video games, comprising:

a generally round housing which comprises a flat bottom and flat top, and further comprises a plurality of first compartments on a first side of the housing and plurality of second compartments on a second side of the housing;

the first compartments vertically oriented and adapted to receive and hold only VCR tapes, such that a user can read a title of each VCR tape on spines thereof, the first compartments of a width of approximately 1 1/4 inches, the first compartments of a sufficient depth to allow portions of the VCR tapes inserted therein to extend beyond the periphery of the housing, the first compartments juxtaposed to allow the user to place the user's fingers around the VCR tape to pull the VCR tape from the holder;

the second compartments vertically oriented and adapted to receive and hold DVD's and video games, such that a user can read a title of each DVD and video game on spines thereof, the second compartments of a width of approximately 3/4 inches, the second compartments of a sufficient depth to allow portions of the DVD's and video games inserted therein to extend beyond

the periphery of the housing, the second compartments juxtaposed to allow the user to place the user's fingers around the DVD's and video games to pull the DVD's and video games from the holder; and

the rotating display holder further being adapted to receive an additional rotating display holder on the flat top thereof, resulting in a stacking of rotating display holders for holding additional VCR tapes, DVD's and video games.

2. The rotating display holder for VCR tapes, DVD's, and video games as described in claim 1, wherein the rotating display holder is motorized.

3. The rotating display holder for VCR tapes, DVD's, and video games as described in claim 2, wherein the rotating display holder is remotely controlled, allowing the user to cause the holder to automatically rotate to allow the user to easily locate a particular item contained within.

4. The rotating display holder for VCR tapes, DVD's, and video games as described in claim 1, wherein the rotating display holder is manufactured of wood.

5. The rotating display holder for VCR tapes, DVD's, and video games as described in claim 1, wherein the rotating display holder is manufactured of metal.

6. The rotating display holder for VCR tapes, DVD's, and video games as described in claim 1, wherein the rotating display holder may be customized by a user, by the user inserting panels in slots to create compartments of a desired size.
